Title: A Wild fewer dream with cowboys, pigs and weird shapes

User guide

Use WASD to move around and IJKL to look around. W will make the pig move forward and S backwards. With ARROWUP you can speed the arms of the cowboy and other things up and with ARROWDOWN you can make them slow down or even halt completely.

The donut in the middle can be dragged around with your mouse.

Results

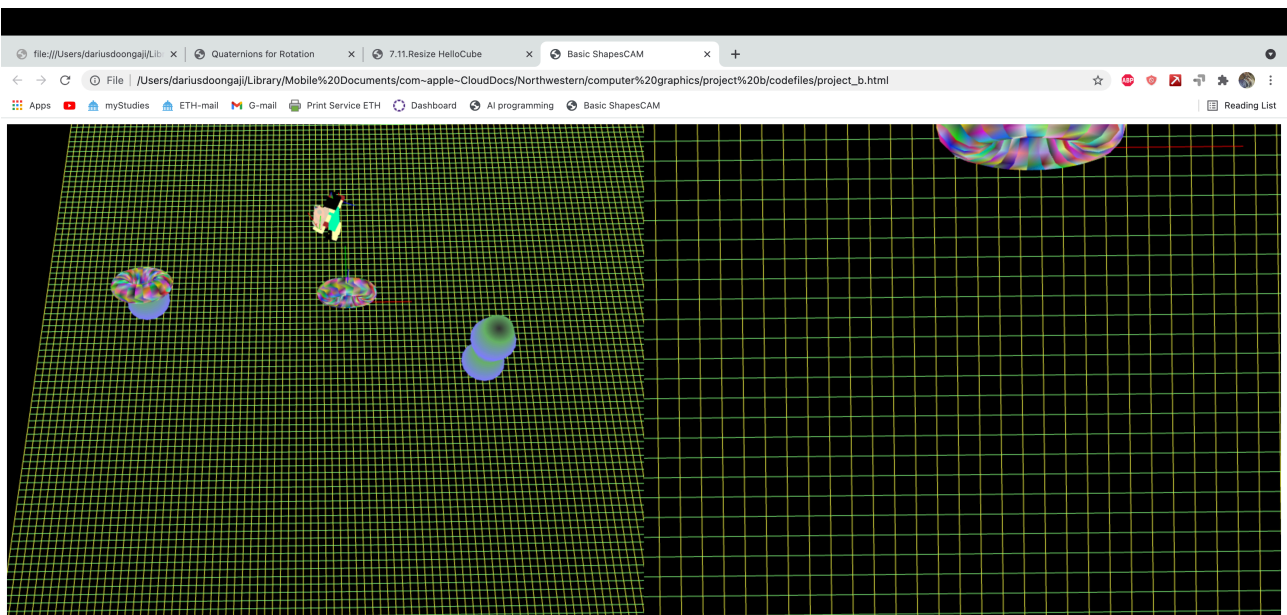

Hey there stragner!

Welcome to this very strange place. Here are some tips:

Use WASD to move around and IJKL to look around. W also makes the pig move forward and S backwards with the up and down arrow keys you can control the speed of the cowboys arms...and also other things scattered around. The donut in the middle can be dragged around with your mouse.

Have fun!

Picture 1) starting position with the two cameras side by side (left perspective/ right orthographic). I recommend pressing K to look down and then pressing S to get into a position with a better view.
